Luxury Greenhouses

HAMPTON

Luxury Greenhouses

Discover the art of refined gardening with our high-end luxury timber and aluminium greenhouses, where architectural elegance meets exceptional performance.

Designed for discerning homeowners and passionate growers alike, our greenhouses offer more than a space for plants; they provide a sanctuary of style, tranquillity, and enduring quality. With meticulous craftsmanship and premium materials, each structure is a testament to both beauty and functionality

TIMELESS & TRADITIONAL HAMPTON GREENHOUSES

Bespoke by Nature. Engineered for Life.

Every Hampton greenhouse begins with the finest materials and timeless design principles. Our timber is naturally durable, thermally modified with heat and steam rather than chemicals. The modification goes all the way through the timber, not just across the surface, driving out the soft cell tissue - the part that absorbs moisture and the part rot feeds on. Take away the food and decay has nothing to live on. Its close, even grain gives a smooth, tactile finish, you can feel the quality at the touch.

To protect this exceptional timber even further, select one of the Hampton ToughCoat™ colours. The base coat is a water-based two-pack system with exceptional adhesion to the timber, and the top coat follows within a two to three hour window so the two chemically bond and fuse into a single film. UV-stable, it resists moisture and wear—and it's tough, even scratch-resistant—preserving a refined, low-maintenance finish that thrives in greenhouse conditions. Inspired by Victorian proportions, every detail is considered.

Surfaces are angled to shed standing water, and our signature Hampton Design roof system features powder-coated, extruded aluminium components externally, balancing durability with design—from ridge to gutter—extruded from Hampton's own dies to enhance performance and complement the timber. While others try to make aluminium look like timber, Hampton starts with the original and applies aluminium only where it adds genuine performance benefits, such as the exterior of the roof—all while preserving the time-honoured tradition of the original timber greenhouse.

Our patent-pending ventilated glazing system holds the glass slightly off the timber rebate, allowing air to circulate and condensation that forms on the inside to escape. The result is a drier, well-ventilated interior designed into the fabric of the structure.

This is heritage craftsmanship—elevated by thoughtful innovation.

THE PROCESS

The phone consultation

Once you have an understanding of our greenhouse models and which you may prefer, you'll have the opportunity to discuss this further with our team. Through a detailed phone consultation, we will discuss your practical needs and design preferences to gain a clear understanding of how a Hampton greenhouse could best serve you. This conversation will cover your preferred model, size, and finish, how you intend to use your greenhouse, and the specific details and constraints of your garden space. This will also provide you with the opportunity to ask questions about our products or processes.

Concept and initial quotation

Following the consultation, our design team will generate a detailed specification and architectural render to help you visualise your greenhouse. This will be supplied alongside a quotation for the greenhouse as currently specified.

Experience the craftsmanship

As an optional step, we welcome you to visit our factory in Northern Ireland to tour our workshop and experience our precision engineering firsthand.

Virtual site assessment

While not required for every project, we may conduct a video call to assess the suitability of your chosen model for your garden and any accessibility issues that might occur during installation. In particularly complex projects, we may also arrange an in-person site visit.

Tailoring the details

At this stage, our team will discuss the optional enhancements available. Our range of finishing touches is designed to elevate both form and function, including additional roof vents, premium cold frames, and a curated range of plant display furniture.

Contract and base specifications

Our team will provide updated drawings and renders that include any selected enhancements, and a final quotation and contract. At this stage, we will also provide specifications for the concrete base, and where relevant, brickwork, as this work will need to be undertaken by your builder ahead of the greenhouse installation.

Signing the contract

When you're completely satisfied with the specification of your greenhouse, it's time to put pen to paper and officially get the process started. A 50% deposit is required on contract. The remaining 50% is due before the greenhouse is delivered to your home.

HAMPTON

Luxury Greenhouses

CHOOSE FROM FOUR
GREENHOUSE STYLES

THE CAUSEWAY

Grand pavilion greenhouse.
Unmistakable presence.

THE BALMORAL

Elegant. Symmetrical.
Quietly commanding.

THE DUNLUCE

Timeless. Balanced.
Classically proportioned.

THE STRANGFORD

Compact. Practical.
Effortlessly elegant.

THE CAUSEWAY

THE CAUSEWAY

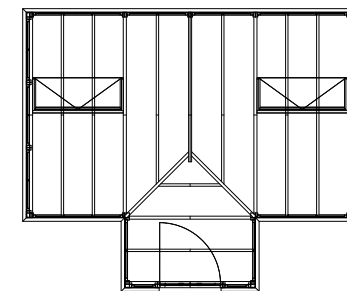

Grand pavilion greenhouse. Unmistakable presence.

The Causeway is a distinctive architectural greenhouse distinguished by its projecting gable pavilion and steep 45° roof pitch. Its central entrance is framed within the gable, creating a strong focal point that suits both symmetrical formal terraces and informal gardens, where it can be positioned as a central axis. Measuring approx. 4.8m x 4.0m including gable projection, it is available with either a low brick base or a timber panel base—each offering a distinct presence.

Made from naturally durable timber, thermally modified with heat and steam, with powder-coated aluminium along the ridge, gutters, and roof trims, it's finished with Hampton ToughCoat™ two-part coating system and backed by a full written Hampton warranty. Our patent-pending ventilated glazing system allows air to circulate and condensation to drain away—while making glass replacement straightforward. Ventilation includes two thermostatic roof vents and four side windows.

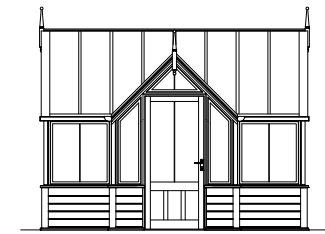

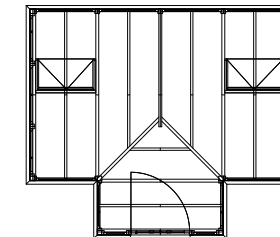

Because of its central gable design, the Causeway is usually extended symmetrically—typically by 1.35m bays on each side—to maintain its balance. Striking and durable, the Causeway is designed to elevate any garden setting with enduring impact.

Depth: 2.8m (inc. gable)
Height: 2.8m

THE BALMORAL

THE BALMORAL

Elegant. Symmetrical. Quietly commanding.

Elegant and classically proportioned, the Balmoral brings traditional greenhouse form with refined simplicity. Its symmetrical roofline and flush gable front give it a quietly confident presence—equally suited to period settings and contemporary garden layouts. At approx. 4.7m x 3.0m, the footprint is practical yet generous, and you can choose between a low brick base for a grounded, timeless look or a timber panel base which reduces the amount of building work required.

The Balmoral is built from naturally durable timber, thermally modified with heat and steam, and features powder-coated aluminium for the roof trims, ridge, gutters, and flashings. It's finished in Hampton's exclusive ToughCoat™—chemically bonded, UV-stable, and backed by a full written Hampton warranty. Our patent-pending ventilated glazing design helps manage condensation while making future glass replacement easy. Airflow is controlled through two thermostatic roof vents and four manually operated side windows.

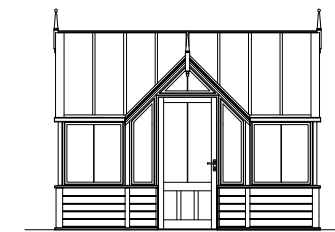

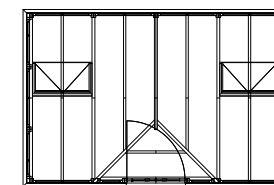

Because of its central gable design, the Balmoral is usually extended symmetrically—typically by 1.35m bays on each side—to maintain its balance.

THE BALMORAL **TIMBER BASE**

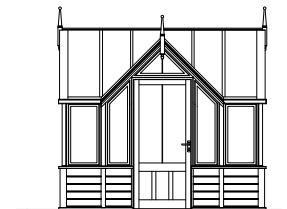

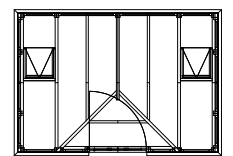

THE ESTATE

Width: 3.1m
Depth: 2.2m
Height: 2.8m

THE DUNLUCE

THE DUNLUCE

Timeless. Balanced. Classically proportioned.

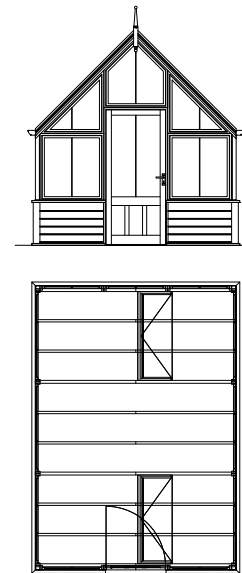

The Dunluce is a balanced, traditional greenhouse with classical proportions and a functional layout. Its gable-fronted design and central single door—hinged to open in or out—create a quietly commanding presence that suits both period and contemporary gardens. Measuring approximately 3.0m x 4.2m, it is available with either a low brick base or a timber panel base with shiplap pencil-mould boarding, which provides a little more floor space than its brick-based counterpart.

Crafted from naturally durable timber, thermally modified with heat and steam, with powder-coated aluminium detailing to the roof exterior, it's finished with Hampton ToughCoat™ coating and backed by a full written Hampton warranty.

Inside, our patent-pending ventilated glazing system drains condensation outside and allows for easy glass replacement should the need ever arise. Ventilation includes two thermostatic roof vents and four side openings. The Dunluce can be extended by a single 1.35m bay—or as many as required—offering flexibility without disrupting its symmetry.

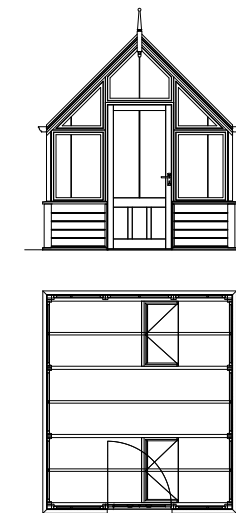

Understated yet enduring, the Dunluce is built to last and designed to evolve with your garden.

THE DUNLUCE **TIMBER BASE**

THE STRANGFORD

THE STRANGFORD

Compact. Practical. Effortlessly elegant.

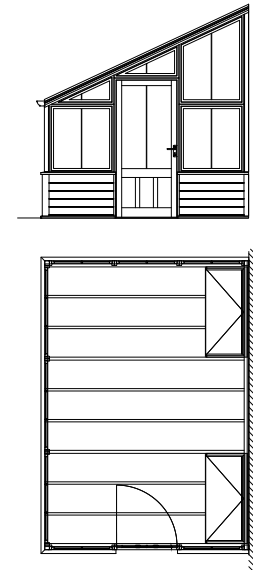

The Strangford is Hampton's lean-to greenhouse—crafted to sit elegantly against a garden wall, boundary, or courtyard edge. With a compact footprint of approx. 3.0m x 4.2m and a 25° roof pitch, it's perfectly suited to smaller spaces without compromising on performance or design.

A central door set within the long elevation, beneath a triangular gable, creates symmetry and ease of access. The frame is built from naturally durable timber, thermally modified with heat and steam, with powder-coated aluminium detailing to the ridge, gutters, and flashings, and is backed by a full written Hampton warranty. It's finished in Hampton ToughCoat™, our bonded water-based two-pack coating system — available in six colours

Our patent-pending ventilated glazing system helps manage condensation and allows for straightforward glass replacement via clip-on trims. Two thermostatic roof vents and three side windows regulate airflow. The Strangford is available with either a traditional brick base or a lighter timber panel format.

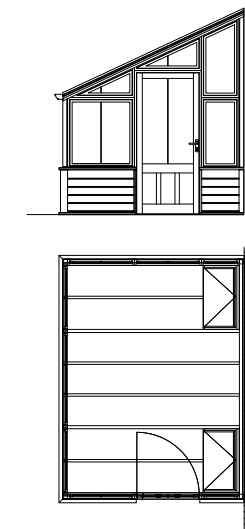

Compact, refined, and enduring—The Strangford proves small-scale structures can still make a lasting architectural statement.

BESPOKE DESIGN SERVICE

Every Hampton Greenhouse is thoughtfully designed for flexibility. While our four core models offer timeless style and balanced proportions, each can be personalised to suit your space and growing ambitions.

We offer a range of standard upgrades, including:

- Extending the length with modular bays
- Additional roof opening vents
- Cold frames for extended and sheltered planting
- Mechanical window openers for hands-free ventilation
- A range of staging and plant display furniture

If your greenhouse is being installed against a boundary or garden wall, we can design and supply a discreet box gutter system, complete with structural brackets integrated into the greenhouse structure. This allows for clean, efficient water management while maintaining the greenhouse's elegant form.

Alternatively, if you plan to position your greenhouse against a gable wall—such as a garage or outbuilding—we can remove the gable frames and provide a flashing kit to ensure a seamless, weatherproof connection.

These options are part of our commitment to thoughtful, precision-built design—ensuring your Hampton Greenhouse not only fits its setting but enhances it for years to come.

CONSTRUCTION FEATURES

Timber and Coating:

Our timber is naturally durable, thermally modified with heat and steam rather than chemicals. The modification goes all the way through the timber, not just across the surface: it drives out the soft cell tissue — the part of the timber that absorbs moisture, and the part that rot feeds on. Take away the food and decay has nothing to live on. The result is far greater resistance to decay and movement than untreated timber. Every frame is backed by a full written Hampton warranty.

Its close, even grain offers natural warmth and a smooth, tactile feel—far beyond anything aluminium can offer. You can see, touch, and even smell the difference. Every frame is protected with Hampton ToughCoat™, our exclusive water-based, two-part bonded coating. Chemically bonded, UV-stable,

and moisture-resistant, Hampton ToughCoat™ provides long-lasting protection and a refined, low-maintenance finish that thrives in greenhouse conditions.

Roof System – The Hampton Design:

Greenhouse roofs are often the hardest part to maintain—so we’ve reimaged them. The Hampton Design blends classical form with engineered performance. We’ve developed a complete aluminium roof system including ridge, vents, trims, valleys, flashings, gutters, and downpipes—all powder-coated and precision-extruded from Hampton’s own dies. These components work together to shed water, resist corrosion, and visually complement the timber frame.

Glazing Innovation:

Typical greenhouses often trap condensation between glass and frame. Ours doesn’t. Our patent-pending ventilated glazing system uses a custom clip to hold the glass slightly off the rebate, creating a subtle gap for airflow and drainage. A powder-coated trim finishes the detail, echoing traditional putty glazing while offering modern durability and clarity.

GREENHOUSE COLOUR OPTIONS

Select one of Hampton's ToughCoat paint colours, specifically engineered for a greenhouse environment.

Basalt Soft White Canvas Cloth Putting Green Bamboo Stem Swedish Green

TWO BASE OPTIONS

Choose between a low brick base for a grounded, timeless look or a timber panelled base which reduces the amount of building work required.

Greenhouse with timber panelled base

£42,985 – £51,590
(Approx. €50,200 – €60,200)

Greenhouse for a brick base

£24,965 – £47,300
(Approx. €29,200 – €55,200)

Base Construction Costs

£10,000 – £20,000
(Approx. €11,700 – €23,400)

The only external costs are for constructing the concrete base and, if preferred, a low brick wall in place of the timber base panels that we manufacture. We will provide detailed technical drawings and specifications for you to share with a builder of your choosing.

CRAFTED FOR GROWING. BUILT FOR LIFE.

A Hampton Greenhouse is more than a place to grow — it's a space to unwind, reconnect, and bring structure to your garden year-round. Designed by hand, built from premium materials, and tailored to your needs, each model reflects over 40 years of expertise in fine timber buildings

Whether you're a keen grower, a design-conscious homeowner, or simply looking to create a space of quiet beauty, we invite you to explore what makes a Hampton different.
